TITLE: Light and fire-proofing of cotton-flat textile materials - by treatment
with aq. soln. contg. oak extract and potassium hexa:cyano-ferrate and with
fire-proofing soln.

INVENTOR: FROLOV, B I; ILIN, A A ; KHODYREV, V I

ABSTRACTED-PUB-NO: SU 1595975A
BASIC-ABSTRACT:

The method comprises treatment of fabric with aq. soln. contg. 15-23 g/l oak
extract and 20-60 g/l of potassium hexacyanoferrate, dyeing in compsn. contg.
20-60 g/l of salt of multivalent metal, washing and impregnating twice with
fireproofing soln. contg. 80-120 g/l orthophosphoric acid 150-200 g/l urea and
10-60 g/l of hexamethylene tetramine at 35-40 deg.C, for 20-60 mins. Then the
fabric is dried to final moisture content 6-8%. Ammonium-iron sulphate, cobalt
sulphate, nickel sulphate or copper sulphate can be used as multivalent metal
salt, and the fireproofing soln. can additionally contains 15-25% g/l of
potassium bichromate.

Tests show that the strength of the material after 65 hrs. of UV irradiation is
upto 95.1% of initial strength for warp and up to 100% of initial strength for
weft compared to 39.5% and 82.4%, respectivel y, for the fabric treated with
the known method. The resistance to searing (burning through) is increased up
to 193s.

USE/ADVANTAGE - In finishing of special purpose textiles, esp. fabrics used for
prodn. of working clothes for welders and metallurgical workers. Increased
resistance to searing and light resistance of material are obtd. Bul.36/30.9.90

ABSTRACTED-PUB-NO: SU 1595975A
BASIC-ABSTRACT:

The method comprises treatment of fabric with aq. soln. contg. 15-23 g/l oak extract and 20-60 g/l of potassium hexacyanoferrate, dyeing in compsn. contg. 20-60 g/l of salt of multivalent metal, washing and impregnating twice with fireproofing soln. contg. 80-120 g/l orthophosphoric acid 150-200 g/l urea and 10-60 g/l of hexamethylene tetramine at 35-40 deg.C, for 20-60 mins. Then the fabric is dried to final moisture content 6-8%. Ammonium-iron sulphate, cobalt sulphate, nickel sulphate or copper sulphate can be used as multivalent metal salt, and the fireproofing soln. can additionally contains 15-25% g/l of potassium bichromate.

Tests show that the strength of the material after 65 hrs. of UV irradiation is upto 95.1% of initial strength for warp and up to 100% of initial strength for weft compared to 39.5% and 82.4%, respectivel y, for the fabric treated with the known method. The resistance to searing (burning through) is increased up to 193s.

USE/ADVANTAGE - In finishing of special purpose textiles, esp. fabrics used for prodn. of working clothes for welders and metallurgical workers. Increased resistance to searing and light resistance of material are obtd. Bul.36/30.9.90
